PROFILE

I am a passionate Full-Stack developer and Tecnico in software analysis with experience in front-end and back-end app development. I have extensive experience using technologies such as Javascript, React, Bootstrap, HTML, CSS, SASS, Node.js, Express, Python, MongoDB, PostgreSQL, MySQL and AWS. I have worked across industries, including e-commerce and finance. My goal is to join a dynamic and growing company where I can expand my skills in the IT field. I am a dedicated learner with excellent teamwork abilities and adaptability to different contexts.

WORK EXPERIENCE

Full Stack Developer - Freelancer

SmartBooking - 2023

- Developed a hotel reservation application using the MERN stack (MongoDB, Express, React, and Node.js).
- Designed and developed the front-end of the booking page.
- Implemented user and administrator profiles with respective functionalities.
- Successfully deployed the app and managed the database.
- Enabled advanced features such as creating and modifying hotels, assigning rooms, enabling/disabling hotels and rooms, and sending email confirmations for reservations.

Full Stack Developer - Freelancer

LiteT - PrototypesDevs | 2023

- Developed application users to register companies and products while also managing user authentication and login functionality.
- Design and develop an intuitive and user-friendly web interface for company and product registration.
- Implement secure user authentication and login functionality to safeguard sensitive information.
- Create user profiles with personalized settings and preferences.
- Develop the back-end functionality to handle company and product registration, storage, and retrieval.
- Incorporate form validation and error handling to ensure data integrity.

Full Stack Developer - Freelancer

CryptoApp - PrototypesDevs | 2023

- I am responsible for creating a web application that allows users to conveniently access and monitor the prices of various cryptocurrencies. using the MongoDB, React, SASS and Node.js.
- I design and develop a user-friendly and visually appealing web interface for the cryptocurrency price tracker.
- I implement features to fetch and display real-time cryptocurrency prices from various data sources, such as APIs or exchanges.
- I build interactive charts and graphs to visualize the historical price data of cryptocurrencies.
- I allow users to customize their cryptocurrency portfolio by selecting specific coins and tracking their prices.

Full Stack Developer - HENRY

OrionMusicX - HENRY | 2023

- I Implemented the functionality for users to create an account in the application and then log in using their email address and password.
- I Configured Google authentication to allow users to log in using their Google accounts.
- I Designed and developed a combined filtering system that allows users to search and filter beats based on various criteria, such as genre, rhythm, duration, etc.
- I Configured integration with PayPal to enable users to add beats to their shopping cart and make secure and easy payments.
- Implemented the option for users to listen to previews or snippets of the musical beats.
- I deployed OrionMusicX on the domain orion-proyect.web.app using Firebase, ensuring that the application is available and functional for users.

Front-end Developer - HENRY

Rick and Morty App - HENRY | 2022

- Built a React-based app that consumes the Rick and Morty API.
- Implemented features like login, search bar, filters, and a like button.
- Collaborated with the team in designing and developing the front-end of the booking page.
- Created a user profile and deployed the app.

Full Stack Developer - HENRY

CountriesAPP - HENRY | 2022

- Developed an application using the external Restcountries API to display information from different countries.
- Implemented functionalities such as search, filtering, sorting, and activity creation.
- Collaborated with the team in designing and developing the front-end of the booking page.
- Created an administrator profile and successfully deployed the app.
- Managed the app's database.
